

Family Medicine Residency Program Denver, Colorado

Thank you for your interest in our program!

We are proud of so many things about our program; it's hard to contain ourselves! Here are a few of our favorite features:

- **Our people** – We have an outstanding group of residents, faculty, and staff who work well together and care about each other.
- **Full spectrum care** – We provide full spectrum care in the outpatient, inpatient, labor and delivery, and ICU settings in the heart of a major metropolitan area.
- **Care for the underserved** – Most of our patients have no insurance or other access to care. It is a privilege to provide excellent care to our entire community and a pleasure to work in a mission-driven hospital system.
- **Spanish Language Training** - From travel abroad to monthly Spanish-only meetings and immersive clinical experiences, we will support your Spanish language learning goals.
- **Integrated Clinic Model** – Bruner Family Medicine is a PCMH/CPC+ clinic that focuses on innovation and quality improvement so we can provide the best care possible. Your clinic team includes care managers, pharmacists, psychologists, diabetic educators, RNs, dieticians and many others to provide comprehensive care.
- **Opportunities for enhanced learning** – In addition to our well-rounded training, we have special emphasis tracks in obstetrics, sports medicine and integrative medicine for those who wish to gain experience in these fields. Additionally, our Maternity Care (OB) and Palliative Care Fellowships are highly regarded.
- **Collaboration** – We have a great relationship with the other GME programs (OB, IM, and surgery) in our hospital. We are a model for mutually beneficial collaboration between specialties. Our very busy community hospital has more than enough procedures, deliveries, and patients to go around.
- **Innovation and growth mindset** - We know that learning needs change over time and between residents. In addition to ample elective time, we pride ourselves on being a program that listens to residents and puts ideas into action. From schedule changes to POCUS training, we are excited to support you and your passions.
- **State-of-the-art hospital** – Our beautiful hospital was built in 2014. Not only do we have amazing mountain views and comfy call rooms, the technology is adept (Epic) and the nurses are amazing (Magnet Hospital)
- **Wellness focus** – We believe a supportive environment is the best one to learn in. GME and Residency Wellness Committees help direct where we should put our focus, and we listen. Some recent examples include: free gym membership, personal financial wellness training, schedule changes, EMR efficiency training (Dragon use)

OUR CURRICULUM

The Family Medicine Residency Program at Saint Joseph Hospital is designed to prepare residents for success in any practice setting. Our curriculum is strong: you will complete the program having admitted patients to the ICU, delivered countless babies and performed myriad hospital procedures. By the end of your tenure you will have cared for over 1,800 clinic patients and performed hundreds of office procedures including colposcopy, ultrasounds, fracture care, joint injections, vasectomies, and minor surgery. The faculty will help you design experiences that can include global health, advanced obstetrics, integrative medicine, and almost anything you can imagine.

Our faculty and residents share the belief that the best physician is a well-rounded one. We balance the high standards of academic rigor with respect for your life outside of medicine. The community we have built among our attending physicians, residents, and staff makes our program both incredibly supportive and incredibly strong.

RESIDENT PERSPECTIVES

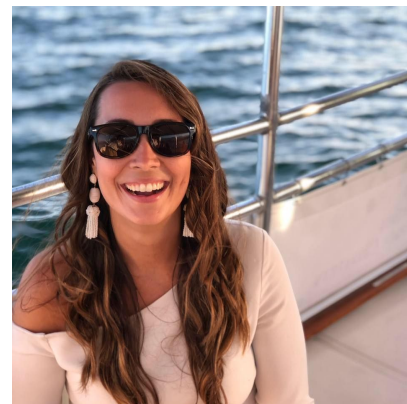

“I heard about this program through a list circulating around my medical school, Indiana University. My dream residency program was full-spectrum training, specifically substantial obstetrics training as a family physician, working with urban underserved populations. After looking into the program and speaking with the faculty and residents, I knew I found my residency home. I am also passionate about representation and diversity in medicine, which is one of the reasons I have been involved in recruiting. One of the things I love about Joes is knowing the faculty truly cares about our well-being and wants us to feel comfortable discussing any issues or ideas.”

-**Abria Bonner, MD (PGY 3); OB Track** abria.bonner@sclhealth.org

“I have felt so lucky to have matched at Saint Joe’s for my residency training. Not only is Denver an amazing place to live, but the first time I met the faculty and residents of the Saint Joseph Family Medicine Residency, I knew I had found the place for me. I’m originally from the Central Coast of California and spent 4 years in Miami, Florida for medical school at FIU. I was in search of a program that would challenge me to become an excellent physician while being surrounded by people I’d consider my best friends. I was initially drawn to Joe’s strong mission of underserved care, well-rounded training, and a culture of support and friendship. Saint Joseph’s itself is a perfect blend of teaching and community hospital, with emphasis on helping learners to reach their potential, without the hustle and bustle of a large academic center.”

- **Katie Klein, MD (PGY3), Chief Resident; Integrative Medicine Track**
katherine.klein@sclhealth.org

“Hello, I’m so glad you are considering St. Joe’s Family Medicine! I moved from Chicago to Colorado for medical school and am thrilled to be staying here for residency at St. Joseph Hospital. St. Joe’s Family Medicine Residency seemed like the perfect place to maximize all the elements I love most about being a primary care physician: broad-spectrum training in the context of a community hospital that deeply cares for the social context of patients. As a member of the National Health Service Corps, I hope to practice family medicine in an underserved context after graduating residency. My particular interests include psychiatry, inpatient medicine, and palliative care. At St. Joe’s I feel like I get the chance to explore my individual interests in medicine and so much more! Outside of medicine, I can be found trail running, playing spikeball, swing dancing, baking banana bread, playing the ukulele, or teaching Sunday school to a delightful class of first graders. I would be happy to answer any questions you have about residency, St. Joe’s, or life in Denver!
